Appl.No.: 08/907,888

IN THE CLAIMS

Please amend the claims as follows:

- 1. (Amended) An adaptive slope compensator for compensating [the] <u>a</u> current mode power converter comprising:
 - a programmable current source which generates \underline{a} programmable current;
 - a grounded capacitor [associate] <u>associated</u> with said programmable current <u>source to</u> generate [the] <u>a</u> slope signal;
 - a switching diode [to synchronized] for synchronizing said slope signal with [the] <u>a</u> switching signal of <u>said</u> power converter,

wherein said slope signal is reset to zero in response to [the] an off state of said switching signal;

<u>an</u> input stage of said programmable current source having an input resistor coupled to [the] <u>a</u> voltage feedback loop of <u>said</u> power converter to [effect] <u>affect</u> the magnitude of said programmable current and said slope signal;

wherein the slew rate of said slope signal is responsive to the signal of said voltage feedback loop during [the] <u>an</u> on [time] <u>state</u> of said switching signal; [and]

said slew rate and magnitude of said slope signal are inversely proportional to [the] <u>a</u> change of input voltage of <u>said</u> power converter and are directly proportional to [the] <u>a</u> change of output power of <u>said</u> power converter; <u>and</u>

Appl.No.: 08/907,888

<u>an</u> output stage of said programmable current source [having] <u>has</u> an output diode and <u>an</u> output resistor [in series] coupled <u>in series</u> to [the] <u>a</u> current feedback loop of <u>said</u> power converter to achieve the slope compensation.

- 2. (Amended) The [Adaptive] adaptive slope compensator in accordance with claim 1, wherein said programmable current source includes [a] said grounded capacitor at its output terminal to generate the waveform of said slope signal and provide a time constant for the adjustment of said slew rate.
- 3. (Amended) The [Adaptive] adaptive slope compensator in accordance with claim 1, wherein [the] said output stage of said programmable current source has [a] said switching diode [connect] connected to said switching signal therein for synchronizing said slope signal.
- 4. (Amended) The [Adaptive] adaptive slope compensator in accordance with claim 1, wherein said programmable current source [comprising] includes:

a pnp transistor for [the] current control;

an emitter resistor connected between the emitter of said pnp transistor and a constant voltage source for [the] current setting;

Appl.No.: 08/907,888

a base resistor connected between the base of said pnp
transistor and said constant voltage source for providing
[the] bias to said pnp transistor.

[a] said input resistor operatively connected to the base of said <u>pnp</u> transistor and said voltage feedback loop for programming the magnitude of said programmable current;

wherein said programmable current is linearly responsive to said signal of said voltage feedback loop; and

a filter capacitor positioned [in] <u>at</u> the base of said <u>pnp</u> transistor to eliminate [the] switching noise of <u>said</u> power converter.

5. (Amended) The [Adaptive] adaptive slope compensator in accordance with claim 1, wherein the magnitude of said signal of said voltage feedback loop is [direct proportion] directly proportional to the change of input voltage and is [inverse proportion] inversely proportional to the change of output power.

<u>REMARKS</u>

Reconsideration and allowance of the subject application are respectfully requested. Claims 1-5 remain pending, claim 1 being an independent claim.
